Faculty of Science Doctoral Students Union Representative candidates 2026

Molla Abiyu Enyew

I am dedicated worker. In this application, I aim to represent our Science Doctoral Candidates by advocating for transparent academic governance. I also apply transparent communication, fair resource distribution (if) and create strong peer support among doctoral candidates each other.

Owusu-Acheampong Emmanuel

My name is Emmanuel Owusu-Acheampong, a PhD student in Earth Science at the Faculty of Science, ELTE, and I am motivated to serve as a Faculty Representative to ensure that students' voices, concerns, and ideas are effectively represented. Through my experience as a doctoral student and as Presidential Commissioner for International Integration at EDÖK, I have developed strong experience in student engagement, communication, and collaboration. If nominated, I will focus on strengthening communication, supporting both Hungarian and international students, connecting students with relevant opportunities, and ensuring that their concerns are followed up constructively.

Botond Géza Gereczi

Dear PhD Students, My name is Botond Gereczi, a second-year PhD student at the Doctoral School of Earth Sciences. Last year, I had the honour of being elected President of the Doctoral Students' Union in the Faculty of Science (TTK DÖK). Alongside my doctoral research, I intend to remain actively involved in student life, supporting you with any issues that may arise and representing your interests. I would greatly appreciate your support for my candidacy.

Gelagay Girma Wondale

Take a look at the scenery of our lovely city, Budapest. Budapest would not be formed by the cities of Buda and Pest if there were not bridges to cross the Danube River. I wish to play a role like the bridges between the PhD students and local and university administrations.

András Gombás

As a Faculty DÖK representative in the 2026/27 term, I would be glad to continue representing my fellow PhD students in the Faculty DÖK Delegates' Assembly, in our Doctoral School Council, and in our Institute Council, provided I receive a mandate in the election. Additionally, I am happy to continue advocating for doctoral students at the university-wide level within EDÖK—both toward university leadership and sector management—as well as supporting the operations of the Faculty DÖKs. Thank you for your trust and support!

Brigitta Roxána Horváthné Dani

Currently, I serve as a student representative at the ELTE Doctoral School of Environmental Sciences (KTDI), and I would like to continue this work in the future. With the experience I have gained so far, I aim to support our student community and ensure that information reaches you quickly and clearly. I work to ensure that the interests and suggestions of PhD students are always heard—I trust that with your support, I can continue this role.

Dorottya Károlyi

As a third-year PhD student with years of experience as a mentor and student representative, I am running for a seat on the Faculty Doctoral Student Council. Over the past two years, I have gained clear insight into the everyday shortcomings of our doctoral program, many of which could be easily resolved with dedicated attention and effective advocacy. If elected, I am confident that in today's renewing environment and more receptive decision-making atmosphere, I can successfully initiate meaningful, positive changes for the doctoral community.

Levente Szemerédi

I began my third year at the Doctoral School of Mathematics in September. A year and a half ago, seeing how low the number of elected representatives was, the idea occurred to me that I should run as well. I did just that, and thanks to your votes, over the past year I was able to participate in the work first as a faculty-level, then as a university-level representative, and later as a Presidential Commissioner. I answered your questions, took part in organizing events, directed the strategy-building process, and participated in preparing amendments to the Statutes. Compared to the state of affairs last year, together with others we managed to give fresh momentum to EDÖK's operations. If elected, I will work to keep this momentum going and to build a system that ensures its continued sustainability as smoothly as possible.

Dániel Zách

I am Dániel Zách, a fourth-year PhD student at the Doctoral School of Earth Sciences. As I approach the end of my studies, I felt this is a great—and final—opportunity to see what can be achieved in the role of a PhD student representative. While I cannot responsibly promise an immediate tripling of stipends or the construction of the "B" building in Lágymányos, I can promise to be available—whether via email or in person—for any questions or issues that arise; I will do my best to answer them or, if necessary, forward them to the appropriate forums. Thank you in advance for your vote!
