

Gereczi Botond

Presidential program

Brief introduction:

My name is Botond G. Gereczi. I am a PhD student at the Doctoral School of Earth Sciences at ELTE TTK. I graduated from the ELTE Trefort Ágoston High School, where I also served as a student government representative. During my BSc in Earth Sciences and later my MSc in Geology, I twice mentored first-year students, which allowed me to maintain close contact with the Student Government.

I applied for the president position because I feel sufficiently motivated, committed, and enthusiastic to fulfil these responsibilities at the Faculty of Natural Sciences. During my term as president, I aim to help doctoral students working in different locations connect more effectively within their fields of expertise. I will do my best to bring together the large group of doctoral students across various programmes. In addition, I would like to represent the interests of doctoral students in various councils and, if it is needed, will do my utmost to find solutions to problems based on my best knowledge.

My program is therefore the following:

- Providing advocacy at all levels

- Sharing events that address doctoral students

- Supporting the work of EDÖK

Thank you very much in advance for supporting my application.

Best regards:

Botond Gereczi
